MechCal 45kW Energy Efficient fan performance

In August 2010 Sibanye Gold commenced with the process to replace its standard 45 kW fans in operation with a new improved energy efficient fan design brought to the market by MechCal.

Prior to the procurement of the fans, Sibanye Gold performed extensive tests on the fans for the purpose of confirming the fan performance was indeed as claimed by the OEM. The fan performance tests in fact confirmed the claims made by MechCal about the energy efficient fans.

Sibanye Gold entered into a contract with MechCal for the procurement of 882 fans to replace all the standard 45 kW fans across all its operations. The replacement commenced in November 2011 and took place over a period of two years. Initial problems with composite impellers were resolved by reverting to redesigned steel impellers. The power savings realized with these fans amounts to 14,95MW.

This letter does not constitute an endorsement of the product and Sibanye Gold does not accept any liability in this regard. This letter is merely a summary of technical facts and experience by Sibanye Gold about the MechCal 45kW energy efficient fans.
